1. Installation of Roof Insulation
2. Kitchen Cabinets

25X1A9a

Dear Mr. [REDACTED]:

Reference is made to your letter of 17 September 1953 concerning same subjects.

With respect to Item 1, it appears to be general practice to omit the vapor barrier under roof insulation in locations where the average temperature for January is above 35° F. From information on hand, the average temperature for [REDACTED] covers within this category and therefor the vapor barrier will not be required.

25X1A

The kitchen cabinets referred to in Item 2 may be custom made units, following manufacturer's standards and design as indicated on plans.

Very truly yours,

25X1A9a
